Occlus-o-Guide® Appliance Provides Lifelong Benefits With Children’s Orthodontics

The Occlus-o-Guide® makes it possible to straighten children’s teeth in just 4 to 10 months! The Occlus-o-Guide® is an alternative to fixed braces for kids that are typically 8 to 12 years old, also known as the mixed dentition age group. This clear, removable, and comfortable soft plastic appliance is actively worn for two to four hours during the day and at night.

The Occlus-o-Guide® is:

- The easiest and fastest way to straighten teeth in the mixed dentition, (children who are transitioning between primary and adult teeth).
- Ideal for treating most young patients who have any overbite, overjet, crowding, or spacing. This alternative to fixed braces for kids also provides the ideal molar position.
- Backed with an expert understanding of children’s orthodontics, it also corrects serious jaw discrepancies and most temporomandibular joint (TMJ) problems.
- Designed to guide the erupting teeth into the perfect bite position and relationship (referred to as a Class I occlusion).
- Comfortable and yet durable enough to function as the retainer.
- A removable orthodontic appliance, with which children avoid the discomfort and diet restrictions of unsightly wires or brackets associated with traditional braces.
- The ideal removable design of the Occlus-o-Guide® allows children to continue their oral health hygiene routine of brushing and flossing – while preventing periodontal disease, cavities and discolouration that can be side effects of fixed treatment.
- Occlus-o-Guide® allows for the best foundation for a lifetime of attractive, healthy and strong teeth! It allows for earlier children’s orthodontic treatment than traditional braces and other clear alternatives.
- Available in a wide range of expertly crafted sizes, offering the most precise development in children’s orthodontics - up to 13 graduated sizing options available.
- May be combined with other Ortho-Tain® appliances, to meet your child’s needs as they grow and mature.
- Available in a wide range of expertly crafted sizes, offering a precise fit for the patient from 13 graduated sizes.
- The Occlus-o-Guide® technique is successful because it is backed by decades of clinical research, numerous case studies and continued monitoring of finished Occlus-o-Guide® cases.
Occlus-o-Guide® treatment allows correction of overbite, overjet, crowding and spacing to occur all at the same time. Patients can expect a correction of approximately 1mm per month, which translates into 4-10 months of treatment time. See the Occlus-o-Guide® Brochure.

Clinical trials and research studies have confirmed that this type of treatment and its timing may indeed be the best way to achieve oral health, and better retain a straight smile for life - with the least amount of overall effort on the part of the doctor and the patient!

Occlus-o-Guide® gives long lasting orthodontic treatment results to your child. This alternative treatment to traditional braces for kids will give them reasons to smile today and into tomorrow.
